SUMMARY

Pragmatic, customer focused AI software engineer who turns complex business needs into scalable, AI-enabled products. Works across AI, software, data, cloud and automation technologies, adapting the architecture and tools to each product while guiding technical strategy, system integration and stakeholder consulting. Delivered measurable impact across multi-customer platforms: **540+ users served**, **60% less repetitive implementation work** and **20% lower requirements rework**.

EXPERIENCE

Siemens Healthineers AG · Forchheim · Contract

04/2025 - present

AI Software Engineer

- Designed and shipped a healthcare application adopted by **540+ users across 5+ B2B SaaS customers**, supporting a successful multi-customer rollout of an interactive, gamified medical procedure experience.
- Architected a pediatric healthcare application using **Python, SQL, LangChain, and LangGraph**, translating customer requirements into maintainable workflows and production-ready features, from ideation through delivery.
- Engineered a **Claude-powered development and code review harness**, combining AI-assisted coding with iterative feedback loops to identify defects and refine implementations.
- Created a **reusable UI library and 5+ GitHub Copilot instruction sets**, cutting recurring UI implementation effort by **60%** and enabling approximately **2.5x task throughput** while standardizing patterns across application features.
- Led customer discussions and code reviews, translating feedback into release priorities and cutting requirements rework by **20%**.

Siemens Healthineers AG · Erlangen · Contract / Intern

08/2023 - 03/2025

Software Developer - Digital Innovation & Rapid Prototyping

- Use-case ownership. Led **4+ digital transformation use cases** and delivered **7+ solutions from ideation to rollout**, using Design Thinking and rapid prototyping to turn business needs into working software.
- Stakeholder discovery. Facilitated **10+ ideation and incubation workshops**, translating business challenges into feasible prototypes aligned with strategic objectives.
- Requirements and solution design. Drove requirements engineering across **4+ digitalization initiatives**, translating business needs into technical solutions and workflow improvements.
- Workflow automation. Collaborated with **10+ cross-functional stakeholders** to build **8+ Power Platform solutions** and automate **4 workflows**, reducing manual effort.

CORE SKILLS

- Architecture and delivery: Application architecture, requirements engineering, customer discovery, stakeholder workshops, code review, rapid prototyping
- Agents & Evals: LangChain, LangGraph, prompt engineering, GitHub Copilot, Microsoft 365 Copilot
- Software and data: Python, SQL, FastAPI, REST APIs, PostgreSQL, Databricks, Snowflake
- Cloud and automation: Azure, Azure DevOps, Docker, Git, CI/CD, Power Apps, Power Automate, Power BI, SharePoint

LANGUAGES

English (C1, business fluent) · German (B1, advancing)

PERSONAL PROJECT

Enterprise AI Platform

- Application structure and access. Built a **Python/FastAPI** HR workflow prototype with modular API and service layers, JWT authentication and role-based access for HR, managers and employees.
- Retrieval and workflow integration. Implemented policy retrieval with source citations alongside leave approvals, document fulfillment and onboarding task creation.
- Privacy and traceability. Added query redaction, consent checks, record anonymization and retention cleanup, supported by audit events and usage reporting.

EDUCATION

M.Sc. Automotive Software Engineering · Technische Universität Chemnitz · 2022 - 2026 · Completed

- Master Thesis: Enhancing Semantic Segmentation in Synthetic LiDAR Point Clouds via LLM-Based Data Augmentation

B.E. Computer Science Engineering · Gujarat Technological University · 2017 - 2021
